EXECUTIVE SUMMARY

Motivated and detail-oriented Electrical and Electronics Engineering student with a strong interest in Information Technology, software development, IoT, and embedded systems. Proficient in Java, C, SQL, HTML, and CSS, with hands-on exposure to PCB design, sensors, and hardware-software integration through internships and academic projects. Demonstrated leadership, teamwork, and problem-solving abilities through project management and technical event participation. Seeking an opportunity to leverage technical skills, adaptability, and continuous learning mindset to contribute effectively in a dynamic IT environment

EDUCATION

KIT-Kalaighnarkaranidhi Institute of Technology - Coimbatore , India	2023 – 2027
B.E - Electrical and Electronics Engineering , Final year	Current CGPA: 8.03

SSLC : ALL PASS HSLC : 519/600 (86.6%)

EXPERIENCE :

INPLANT TRAINING –Able Electronics Pvt. Ltd. - Coimbatore	Dec - 2024
- Studied construction, working, and testing of power and distribution and sizing of transformers. - Observed transformer assembly, insulation methods, and cooling techniques and also Gained exposure to maintenance practices and fault identification in transformers. - It helps to understand about the winding in it, which has been done based on the requirement.	
INTERNSHIP TRAINING-Hailstone Technologies Pvt Ltd-Coimbatore	May-2025
- Worked on embedded systems fundamentals and microcontroller-based applications - Interfaced sensors and peripherals with microcontrollers.Learned basic embedded C programming and hardware–software integration. - Undergone about the PCB Circuits which has been implemented in real Time projects.	

PROJECTS :

IOT - BASED FIREFIGHTING ROBOT USING ARDUINO UNO

- Aimed at reducing human risk in fire-Zones and inaccessible areas by enabling remote or automated operation.It Designed and developed an autonomous robotic system to detect and extinguish fire in hazardous environments.
- The robot navigates toward the detected fire and activates a water pumping mechanism to suppress flames.Is mainly used in laboratories and easily fire catchable Areas.

ALCOHOL DETECTION AND ENGINE LOCKING SYSTEM

- Developed an embedded safety system to prevent vehicle Driving under the Dringing of Alcohol.It is mainly used to prevent the driving of vehicles Under the Consumption of Alcohol.
- An alcohol gas sensor is used to detect the presence of alcohol from the driver’s breath.When alcohol concentration exceeds a predefined threshold, the system disables engine ignition using a control relay.

SMART CONVERTER CONTROL FOR ELECTRIC VEHICLE BATTERY CHARGING

- Now a days the fixed charging batteries are used for charging the battery ,this reduces the degradation level and lifespan of battery get reduced.
- So we used a AI based model which control charging current based on the battery behaviour .
- This helps in increase in the lifespan of the battery and produce better efficiency.

TECHNICAL SKILLS :

Java	CSS	DSA	Cirkit Designer
C	SQL	GitHub	MATLAB
HTML	OOPs	Python	Proteus

CERTIFICATIONS:

GOOGLE – AI Essentials
INFOSYS SPRINGBOARD – C Programming, Programming in C.
COURSERA – Sensors and Sensor Circuit Design
COURSERA – IoT Devices, Motors and Motor Control Circuits.
NPTEL – Augmenting Design Thinking

ACHIEVEMENTS & VOLUNTEERING :

- Participated in Symposium conducted at KPRIET at March 2025,Coordinated events at Udhayam 2024 managing events and logistics.
- Managed as a Team Leader in projects which has been a great learning in it.
- Participated in other college events like paper presentation and other technical events.
